

Nandini Agrawal

nandini.agrawal03@gmail.com ♦ (646) 431-4421 ♦ <https://agrawalnandini.github.io/> ♦ www.linkedin.com/in/agrawal-nandini

SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL

Frameworks and Libraries: React, LangGraph, Node.js, Django

Agentic AI and Tool Calling: Claude Workflows, ChatGPT AppsSDK, RAG, LLM Tooling & Orchestration(MCP)

Applications and Tools: AWS, PostgreSQL, Splunk, GitHub, Postman, Selenium, Metamask, Hyperledger Fabric

PROFESSIONAL EXPERIENCE

Eclerx

New York City

AI Engineer

Mar 2026 - Present

- Built **Agentic KYC**, a multi-agent POC platform for tier-1 banks automating onboarding/refresh for entities, individuals, and family structures across multiple countries and risk tiers — projected **80% automation** of manual KYC workflows.
- Built a **multi-agent sales lead-generation platform** with subagents mining trending news and client comms to surface qualified leads, cutting manual research time and boosting internal sales efficiency.
- Collaborate with cross-functional teams to design, develop, and launch scalable AI-powered solutions, translating business needs into user-centric applications while driving client engagement, solution adoption, and successful delivery.

Intuit

San Diego, CA

Full Stack Software Engineer 2

Feb 2025 - Jan 2026

- Built and productionized end-to-end GenAI-powered systems using LangGraph and LLM orchestration, combining React-based frontend workflows with backend orchestration services to power an AI-driven tax filing engine achieving 95% accuracy across 10,000 real customer records.
- Architected and implemented a secure Model Context Protocol (MCP) using AppsSDK and LLM tool calling, building authentication, authorization, and API routing layers to safely integrate TurboTax and QuickBooks APIs that led to Intuit launching its GEO initiative within ChatGPT.
- Developed a full-stack AI support automation system, combining RAG pipelines, vector search, backend services, and internal UIs to automate customer support queries and incident root-cause analysis, reducing on-call load by 20–30% during peak periods.

Frontend Software Engineer 1 at TurboTax

Feb 2023 - Jan 2025

- Modernized large-scale React architecture, refactoring more than 5,000 lines of legacy code into modular, reusable components to improve performance, maintainability, and developer velocity while reducing production bugs by 50%.
- Built and shipped end-to-end product flows using feature flagging, experimentation frameworks, and analytics instrumentation, enabling safe rollout of new SKUs and rapid iteration on business-critical features.
- Optimized performance across frontend and backend systems, reducing load time of a core TurboTax plugin by 50% through improved API design, caching strategies, and rendering optimizations.
- Strengthened production reliability and quality, leading peak-season on-call support, debugging distributed systems with Splunk, and implementing Jest unit tests + Playwright/Cypress integration tests to enable low-risk, bug-free deployments.

Columbia University

New York, NY

Columbia Data Science Institute Scholar

Jan 2022 – May 2022

- Designed and built both blockchain and non-blockchain implementations of a collaborative prediction market platform used by 50+ students in a graduate-level course with scalable, user-friendly full-stack design.
- Engineered backend services and smart contract incentives using Python, Django, PostgreSQL, and Metamask, enabling secure authentication, precise prediction scoring, and transparent reward distribution.

Ashoka University

Haryana, India

Research and Software Development Intern

Jun 2020 - Aug 2020

- Created [CovidBloc](#), a blockchain-powered contact tracing system combining a Flutter mobile app, Vue web portal, and Node.js backend and Hyperledger Fabric to securely track and store contact events while preserving data.
 - Enabled identification and analysis of potential COVID-19 spread patterns across 100+ users within the university campus
-

EDUCATION

Columbia University

New York, NY

Master of Science in Computer Science, GPA: 3.79/4.0

Sept 2021 – Dec 2022

Ashoka University

Haryana, India

Postgraduate Diploma in Advanced Studies, Bachelors of Science in Computer Science

Aug 2017 – May 2021

GPA: 3.96/4.0(Diploma), 3.82/4.0(Undergraduate)
